

# A More Sanitary Environment and Reduced Water Usage. AcornVac Makes it Possible.

AcornVac Plumbing Systems include toilets that are designed to **eliminate splash and plume** by drawing air into the toilet with every flush. This innovative system also offers the added benefit of reducing water usage to less than ½ gallon per flush – a **water savings of up to 68%** on every flush.

Tests conducted by **NSF International** comparing gravity toilets to AcornVac's vacuum toilets showed that:

**GRAVITY TOILETS** produced **detectable levels of overspray and bacteria** on the toilet seat and in the area surrounding the toilets.

**ACORNVAC'S VACUUM TOILETS** showed **no detectable overspray or bacteria** on the toilet seat or in the area surrounding the toilet.

**NSF**

NSF International is an independent organization that writes standards, tests and certifies products for the food, water and consumer goods industries to minimize adverse health effects and protect the environment (nsf.org). Founded in 1944, NSF is committed to protecting human health and safety worldwide. NSF is a World Health Organization Collaborating Centre for Food and Water Safety and Indoor Environment.
